Subject to priorities defined by the Technical Council and the Presidium, the results of fib’s work in Commissions and Task Groups are published in a continuously numbered series of technical publications called ‘Bulletins’. The following categories are used:

<table>
<thead>
<tr>
<th>category</th>
<th>minimum approval procedure required prior to publication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Technical Report</td>
<td>approved by a Task Group and the Chairpersons of the Commission</td>
</tr>
<tr>
<td>State-of-Art Report</td>
<td>approved by a Commission</td>
</tr>
<tr>
<td>Manual, Guide (to good practice) or Recommendation</td>
<td>approved by the Technical Council of fib</td>
</tr>
<tr>
<td>Model Code</td>
<td>approved by the General Assembly of fib</td>
</tr>
</tbody>
</table>

Any publication not having met the above requirements will be clearly identified as preliminary draft.

This Bulletin N° 63 was approved for publication as Guide to good practice by the Technical Council of fib in October 2011.

This guide was drafted by fib Task Group 6.9, Design of precast concrete structures for accidental loading, in Commission 6, Prefabrication

Arnold Van Acker (Convener, Belgium)
Carlos Chastre Rodrigues (Univ. Nova de Lisboa, Portugal), Andrzej Cholewicky (Building Research Institute (ITB, Poland), Barry Crisp (Crisp Consultants Pty. Ltd, Australia), Válter José Da Guia Lúcio (Univ. Nova de Lisboa, Portugal), Kim S. Elliott (Precast Consultant, Nottingham, UK), Björn Engström (Chalmers Univ. of Technology, Sweden), Antonello Gasperi (Italy), Arto Suikka (Confed. of Finnish Construction Industries RTT, Finland), Spyros Tsoukantas (National Technical University of Greece), Jan Vambersky (Corsmit Consulting Engineers and Delft University of Technology, The Netherlands)

Corresponding member: John Vantomme (Royal Military Academy, Belgium)

Cover image: North Galaxy Building, Brussels. Twin tower office building, 36 floors high, with 107000 m² office space and 46'000 m² car park in the basement. The architects are Jaspers-Eyers, Montois, Art & Build Brussels; the contractor Interbuild-Willemen-CIT Blaton-Van Laere; and the precaster NV ERGON. The building was constructed in 2003. The precast skeletal structure comprises two storey high circular columns with 600 mm diameter in high strength self-compacting concrete, and prestressed floor beams and floors. The erection speed was four days per storey and per tower. The building was designed to prevent progressive collapse in case of important local damage to the structure.
