## Contents

### Foreword

### 1 Design concepts for durable post-tensioning tendons

1.0 Introduction 1
1.1 Post-tensioning tendon definitions and principles
1.1.1 Post-tensioning and Pre-tensioning – 1.1.2 Internal and external tendons – 1.1.3 Bonded and unbonded tendons – 1.1.4 Specific tendon categories and innovative post-tensioning systems – 1.1.5 Durability considerations)
1.2 Deterioration mechanisms
1.2.1 Experiences and observations – 1.2.2 Fundamentals – 1.2.3 Scenario of deterioration)
1.3 Design strategies
1.3.1 Durability design principles – 1.3.2 Specifications – 1.3.3 Concrete quality and cover – 1.3.4 Waterproofing systems and surface protection systems – 1.3.5 Drainage system – 1.3.6 Expansion joints – 1.3.7 Cracking – 1.3.8 Construction joints – 1.3.9 Segment joints – 1.3.10 Tendon layout – 1.3.11 Access for inspection and maintenance)
1.4 Tendon protection strategies
1.4.1 General principles – 1.4.2 Protection levels of tendons – 1.4.3 Agressivity of environment and exposure – 1.4.4 Protection layers provided by the structure – 1.4.5 Protection levels examples – 1.4.6 Guidance for further developments)

### 2 Materials and construction

2.1 Requirements for materials
2.1.1 Prestressing steel and FRP materials – 2.1.2 Anchorages – 2.1.3 Ducts – 2.1.4 Accessories – 2.1.5 Corrosion protection materials)
2.2 Requirements for construction
2.2.1 Packaging – transportation – storage – handling – 2.2.2 Installation equipment – 2.2.3 Installation of tendons – 2.2.4 Stressing of tendons – 2.2.5 Injection/Filling of tendons – 2.2.6 Inspection of tendons)
2.3 Certification of suppliers and installers

### 3 Maintenance, assessment and rehabilitation

3.1 Introduction
3.2 Maintenance
3.3 Assessment
3.3.1 General – 3.3.2 Tendons of category PL1 and PL2 – 3.3.3 Tendons of category PL3)
3.4 Rehabilitation

### References

### Appendix Maintenance, assessment and rehabilitation of post-tensioning tendons in existing structures

### Appendix references
