

Contents

1	Keywords	1
2	Vision behind preparation of this guide	1
3	Introduction and scope of issues	3
3.1	Meeting owner's business or service objectives	3
3.2	Phases in the life of an asset and their relative cost	3
3.3	Wider societal considerations and requirements	11
4	The owners' requirements and obligations	21
4.1	Performance requirements (4.1.1 Reliability and functionality)	21
4.2	Responsibilities and liabilities (4.2.1 Economic and financial — 4.2.2 Societal and cultural aspects — 4.2.3 Environmental — 4.2.4 Risk management)	23
4.3	Value judgements, decision criteria and probabilistic concepts	35
4.4	Meeting the owner's requirements	37
5	Implications of deterioration of concrete structures	39
5.1	General	39
5.2	Mechanisms of deterioration	42
5.3	Implications of deterioration	44
6	Case histories – dealing with deterioration and extension of asset life	47
6.1	Introduction	47
6.2	Ashby Building, Belfast	47
6.3	Krk Bridge, Croatia (6.3.1 Krk Bridge - Cost analysis for the selective use of stainless steel)	50
7	Engineering aspects of structure management	55
7.1	Philosophy for structure management	55
7.2	Management systems for populations of structures	58
7.3	Planning and implementing through-life care of a structure (7.3.1 Introduction — 7.3.2 Design and assessment considerations — 7.3.3 Maintenance class — 7.3.4 Types of through-life inspection and investigations)	59
7.4	Assessment of existing structures	66
7.5	Overview of repair and remediation methods	70
7.6	Selection of protection and repair options	72
7.7	Performance indicators	74
8	Process management	77
8.1	Establishing the professional team	77
8.2	Scenario selection	77
8.3	Scenario implementation / execution of works	79

8.4	Quality planning and verification during execution of works (8.4.1 The role of the project specification — 8.4.2 The need for revised quality management concepts — 8.4.3 Prevention requires understanding of the execution processes — 8.4.4 Project quality management plan - illustration of contents)	80
8.5	Check list for owners	87
9	Application examples – works for the extension of asset life	89
9.1	Introduction	89
9.2	Steps for managing and making an intervention on a structure	90
9.3	Illustration of process - intervention works upon a bridge	93
10	Standards for the protection and repair of concrete structures	97
11	Some frequently asked questions (FAQ)	99
12	Future look and developments	107
12.1	Overview	107
12.2	Potential implications of climate change	109
13	References, websites and further reading	111
	Appendix A: List of keywords	119
	Appendix B: Examples of deterioration and repairs	129
B.1	Introduction	129
B.2	Commercial buildings	129
B.3	Hotel buildings	130
B.4	Tunnels	132
B.5	Concrete chimneys	133
B.6	Sewage treatment plants	134
B.7	Bridges	136
B.8	Car parks	138
B.9	Swimming pools	140
B.10	Wharves and coastal marine structures	141
B.11	Dams	143
	Appendix C: EN 1504 series for repair and protection of concrete	147
	Appendix D: Standards for protection and repair of concrete	151
D.1	Introduction	151
D.2	European standards	151
D.3	Japanese standards	153
D.4	Australian standards	155
D.5	US standards	157
	Appendix E: Risk assessment and management	159
E.1	Introduction	159
E.2	Qualitative risk assessment	159
E.3	Quantitative risk assessment	164

Appendix F: Benefits of pre-construction planning	169
F.1 Introduction	169
F.2 Some potential problems in producing durable concrete structures	171
F.3 Segment 1: Investigation of potential concrete supply problems	174
F.4 Segment 2: Research into verification of durability	174
F.5 Segment 3: Trial concrete mixes	175
F.6 Segment 4: Investigation of potential placement problems	176
F.7 Segment 5: Finalise construction requirements in project specification	177
F.8 Segment 6: Provision of adequate resources for quality management	177
Appendix G: Project specifications — An owner’s tool	179
G.1 General	179
G.2 The benefits of “thinking construction”	180
G.3 Standards for concrete structures and quality management (G.3.1 Introduction — G.3.2 Hierarchy of European standards and the Execution Standard — G.3.3 Quality management in the Execution Standard — G.3.4 Quality management standards – ISO 9000 series of standards)	181
G.4 Improving the certainty of achieving durable concrete structures	185
G.5 Execution management and the requirement for supporting plans	187
G.6 The Execution Standard and the Inspection Plan	187
G.7 The Execution Standard and the Concreting Plan (G.7.1 Introduction — G.7.2 Developing a specification clause for the execution specification — G.7.3 Linkage between the Concreting Plan and the Inspection Plan — G.7.4 The Inspection Plan — G.7.5 Procurement, production and delivery of concrete — G.7.6 The Reinforcement Plan — G.7.7 The Falsework Plan — G.7.8 The Post-tensioning Plan)	188
G.8 Products and systems used for repair of concrete structures (G.8.1 Introduction — G.8.2 QC but no QA in EN 1504: Part 10 — G.8.3 Example of method 3.2 (recasting in concrete) in EN 1504: Part 10)	195
G.9 Supplementary documents to support the project execution specification	197
G.10 Summary	199
G.11 Concluding remarks	200
