Contents

1 Scope 1
2 Definitions 1
3 General requirements 5
   3.1 General introduction 5
   3.2 Formwork 6
      (3.2.1 Quality of formwork sheeting – 3.2.2 Rigidiy (stiffness formwork) –
      3.2.3 Watertightness – 3.2.4 Stability – 3.2.5 Additional equipment
      (furnishings))
   3.3 Falsework and centring 11
      (3.3.1 General requirements – 3.3.2 Specific requirements)
   3.4 Scaffoldings 14
      (3.4.1 Quality of materials – 3.4.2 Rigidiy – 3.4.3 Stability)
4 Design considerations 15
   4.1 Management of the design 15
   4.2 Design criteria 15
      (4.2.1 Structural design project – 4.2.2 Designing by tests – 4.2.3 Loads
      and combinations – 4.2.4 Eccentricity of loads – 4.2.5 Connections and
      details – 4.2.6 Support settlement – 4.2.7 Foundations – 4.2.8 Ultimate
      stability and redundancy – 4.2.9 Re-use of elements – 4.2.10 Loads due to
      striking: interaction between structure and formwork – 4.2.11 Deflections)
5 Control aspects 18
   5.1 Design control 18
   5.2 Erection control 18
   5.3 Foundation control 18
6 Different types of formwork 19
   6.1 Traditional formwork (fabricated in timber) 19
   6.2 Proprietary formworks 19
      (6.2.1 Formwork panel – 6.2.2 Climbing form – 6.2.3 Slip form)
7 Specialized formwork/falsework/centrings 29
   7.1 Specially manufactured forms 29
   7.2 Bridge shoring 29
      (7.2.1 Definition – 7.2.2 Recommendations for design – 7.2.3 Specific
      recommendations for each shoring element – 7.2.4 Recommendations for
      site work – 7.2.5 Recommendations for formwork striking)
   7.3 Travelling formwork – General aspects 36
      (7.3.1 Definition – 7.3.2 Recommendations for design –
      7.3.3 Recommendations for site work – 7.3.4 Recommendations for
      striking and dismantling)
   7.4 Travelling formwork for deck slabs 39
      (7.4.1 Definition – 7.4.2 Recommendations for design –
      7.4.3 Recommendations for site work – 7.4.4 Recommendations for
      striking and dismantling)
7.5 Tunnel vault formwork
(7.5.1 Definition – 7.5.2 Recommendations for design – 7.5.3 Recommendations for site work – 7.5.4 Recommendations for striking and dismantling)

7.6 Travelling formwork – Movable shuttering system
(7.6.1 Definition – 7.6.2 Recommendations for design – 7.6.3 Recommendations for site work – 7.6.4 Recommendations for striking and dismantling)

7.7 Travelling formwork for balance cantilever bridge construction
(7.7.1 Definition – 7.7.2 Recommendations for design – 7.7.3 Recommendations for site work – 7.7.4 Recommendations for striking and movement situation)

7.8 Apartment formwork
(7.8.1 Definition – 7.8.2 Recommendations for design – 7.8.3 Recommendations for site work – 7.8.4 Recommendations for striking)

7.9 Self-launching gantries
(7.9.1 Definition – 7.9.2 Recommendations for Design – 7.9.3 Recommendations for site work)

7.10 Ready-for-use falseworks
(7.10.1 Definition)

7.11 Heavy duty towers
(7.11.1 Definition – 7.11.2 Description – 7.11.3 Recommendations for design – 7.11.4 Recommendations for site work – 7.11.5 Recommendations for striking – 7.11.6 Collection of Details)

7.12 Sacrificial formworks
(7.12.1 Definition – 7.12.2 Specific recommendations)

Appendix A Calculation of fresh concrete pressure
A.1 Factors of determination of concrete pressure
(A.1.1 Filling speed of pouring the fresh concrete – A.1.2 Hardening temperature – A.1.3 Workability of fresh concrete (Abraham cone) – A.1.4 Slope of the formwork face – A.1.5 Vibration depth – A.1.6 Vibration frequency – A.1.7 Cement proportion – A.1.8 Additives)

A.2 Theories of fresh concrete pressure on the formwork
(A.2.1 American code A.C.I. 347/04 – A.2.2 German norm DIN 18218 – A.2.3 Recommendation of the Spanish: “Instituto Eduardo Torroja” – A.2.4 Study of N.J. Garner)

A.3 Fresh concrete pressure for SCC
