Editor's remarks ........................................................................................................................................ iii
Preface ...................................................................................................................................................... iv

9 THROUGH-LIFE CARE AND MANAGEMENT OF CONCRETE STRUCTURES - ASSESSMENT, PROTECTION, REPAIR AND STRENGTHENING ........................................................................ 1

9.1 Introduction ........................................................................................................................................ 1
  9.1.1 Background ................................................................................................................................. 1
  9.1.2 Concrete - A family of materials ............................................................................................... 2
  9.1.3 Service life design and through-life management aspects ....................................................... 2
  9.1.4 Reactive and proactive approaches to structure management ............................................... 5
  9.1.5 Management systems for populations of structures ................................................................. 9
  9.1.6 Assessment of existing buildings and structures ...................................................................... 10
  9.1.7 The condition of infrastructure – The challenge for assessment, management and repair ... 15

9.2 Brief overview of the development and history of concrete construction ............................... 18
  9.2.1 Introduction ............................................................................................................................... 18
  9.2.2 Early forms of concrete and concrete construction .................................................................. 19
  9.2.3 19th century development of reinforced concrete ................................................................. 21
  9.2.4 Early 20th century development of reinforced concrete ......................................................... 22
  9.2.5 Overview of historical developments in concrete construction and design guidance .......... 26
  9.2.6 Evolution in the properties of concrete ..................................................................................... 31
  9.2.7 Change in the strength of steel reinforcement ......................................................................... 35
  9.2.8 Early prestressing systems ........................................................................................................ 36
  9.2.9 Overview of historical design requirements and approaches to concrete structure design... 37

9.3 Guidance, standards and sources of information for the assessment of existing concrete structures .................................................................................................................................. 38
  9.3.1 Introduction ............................................................................................................................... 38
  9.3.2 CEB Bulletin 243 ..................................................................................................................... 39
  9.3.3 CONTECVET project ............................................................................................................. 41
  9.3.4 ISO 13822: Bases for design of structures- Assessment of existing structures .................... 65
  9.3.5 JCSS report: Probabilistic assessment of existing structures ................................................ 67
  9.3.6 fib Bulletin 17 ............................................................................................................................ 70
  9.3.7 LIFECON project ..................................................................................................................... 71
  9.3.8 REHABCON project ................................................................................................................. 75
  9.3.9 NORECON project ................................................................................................................... 80
  9.3.10 Management of highway structures ....................................................................................... 82
  9.3.11 CONREPNET project ............................................................................................................ 90
9.3.12 CBDG guidance on the assessment of concrete bridges ................................................. 99
9.3.13 Sustainable Bridges project .......................................................................................... 101
9.3.14 fib Bulletin 44 ............................................................................................................... 107
9.3.15 Management of deteriorating concrete structures ....................................................... 109
9.3.16 Institution of Structural Engineers: Appraisal of existing structures - 3rd Edition ......... 111
9.3.17 fib Model Code 2010 .................................................................................................... 114
9.3.18 Swiss codes for the conservation of existing structures ............................................. 115
9.3.19 BRE handbook on the assessment of large panel system dwelling blocks for accidental loading ......................................................................................................................... 119
9.3.20 fib Bulletin 59: Condition control and assessment of reinforced concrete structures exposed to corrosive environments (carbonation / chlorides) ................................................................. 122

9.4 Through-life management of existing structures .............................................................. 133
  9.4.1 Introduction .................................................................................................................. 133
  9.4.2 Performance requirements and owner obligations ..................................................... 136
  9.4.3 Reliability and functionality requirements ............................................................... 137
  9.4.4 Responsibilities and liabilities ................................................................................. 138
  9.4.5 Societal and sustainability perspectives .................................................................... 142
  9.4.6 Value judgements, decision criteria and probabilistic concepts .............................. 147
  9.4.7 Asset management systems ..................................................................................... 150
  9.4.8 Conservation strategies ............................................................................................ 154
  9.4.9 Hazard and risk issues .............................................................................................. 156
  9.4.10 Reasons for assessment (owner’s brief or other requirements) .............................. 164
  9.4.11 Conservation of historical structures - attitudes and influences ............................ 165

9.5 Previous experience - In-service performance of concrete structures and remedial interventions .................................................................................................................................................. 165
  9.5.1 Introduction ................................................................................................................ 165
  9.5.2 Durability of concrete structures in Denmark (Idorn) .............................................. 166
  9.5.3 Lessons to be learnt from European failures (Hauser) .............................................. 166
  9.5.4 Errors associated with USA concrete structures (Fraczek / ACI) ............................. 167
  9.5.5 In-service performance of 200 UK concrete bridges (Wallbank) ............................. 167
  9.5.6 Quality of UK concrete construction (Clark et al) .................................................... 168
  9.5.7 In-service performance inadequacies and the premature deterioration of concrete structures (Jones et al) ........................................................................................................ 168
  9.5.8 Performance of 40 UK concrete bridges (Tajalli and Rigden) .................................... 169
  9.5.9 Durability of post-tensioning tendons (fib Bulletin 15) .............................................. 170
  9.5.10 Stress corrosion cracking and associated failures in prestressed concrete construction in Germany (fib Task Group 9.5) ................................................................................. 176
  9.5.11 Effectiveness of concrete repairs (Baldwin and King) ............................................ 180
  9.5.12 Strategic improvements to the concrete repair industry in the USA (Emmons) ......... 180
