Foreword	iii	
Acknowledgements	iv	
Introduction	xii	
1	Suitability of precast concrete construction	1
1.1	General	1
1.2	Advantages and limitations	2
1.3	Differences in precast and cast in-situ structures	4
1.4	Opportunities in prefabrication	6
1.4.1	Factory-made products	6
1.4.2	Prestressing	6
1.4.3	Optimum use of materials	7
1.4.4	Quality	7
1.4.5	Architectural freedom	7
1.4.6	Structural efficiency	7
1.4.7	Flexibility in use	8
1.4.8	Adaptability	8
1.4.9	Fire-resistant construction	8
1.4.10	Environmentally friendly construction	9
1.4.11	Appearance and surface finishing	9
1.4.12	Transport and site erection	9
1.4.13	Building services	9
1.5	Quality assurance and product certification	10
1.6	Best practices in precast concrete	11
1.6.1	Residential buildings	11
1.6.2	Office buildings	12
1.6.3	High-rise buildings	15
1.6.4	Hotels	15
1.6.5	Public services buildings	16
1.6.6	Educational and cultural buildings	17
1.6.7	Retail buildings	19
1.6.8	Sports arenas and stadia	20
1.6.9	Car parks	21
1.6.10	Industrial buildings and warehouses	21
1.6.11	Other structures	22
2	Preliminary design considerations	24
2.1	Approaches to design	24
2.2	Basic design recommendations	24
2.2.1	Respecting a design philosophy to precasting	25
2.2.2	Using standard solutions whenever possible	25
2.2.3	Details should be simple	26
2.2.4	Taking dimensional tolerances into account	27
2.2.5	Taking advantage of the industrialization process	27
2.2.6	Modulation is recommendable	27
2.2.7	Standardization of products and processes	28
2.3	Basic conceptual design principles in earthquake regions	29
2.3.1	Structural simplicity	29

2.3.2	Regularity and uniformity in plan	29
2.3.3	Regularity and uniformity in height	33
2.3.4	Bi-directional resistance, torsional resistance and stiffness	34
2.3.5	Adequate and secure connections in precast buildings	35
2.3.6	Adequate foundation	35
2.3.7	Effects of the contribution of infills, partitions and claddings	36
2.4	Schematic design in initial stage	37
2.5	Selection of a structural precast system	39
2.5.1	General	39
2.5.2	Portal and skeletal systems	40
2.5.3	Bearing-wall systems	40
2.5.4	Façade systems	41
2.5.5	Floors and roofs	42
2.5.6	Cell systems	42
2.6	Mixed precast construction	43
2.7	Review of precast concrete structural systems	44
3	Precast building systems	45
3.1	Introduction	45
3.2	Structural systems	45
3.2.1	Portal-frame systems	46
3.2.2	Skeletal frame systems	47
3.2.3	Wall-frame systems	50
3.2.4	Floor systems	51
3.2.5	Precast roof solutions	55
3.2.6	Concrete façades	56
3.3	Applications of precast structural systems	59
3.3.1	Residential buildings	59
3.3.2	Offices and administrative buildings	61
3.3.3	Hotels and hospitals	62
3.3.4	Educational buildings	62
3.3.5	Industrial buildings and warehouses	63
3.3.6	Commercial buildings	64
3.3.7	Car parks	64
3.3.8	Sports facilities	67
4	Structural stability	69
4.2	Unbraced precast structures	70
4.2.1	Cantilever action of columns	70
4.2.2	Frame action	72
4.3	Braced precast structures	73
4.3.1	Principle	73
4.3.2	Central cores and lift shafts	74
4.3.3	Shear-wall action	75
4.3.4	Infill walls	77
4.4	Floor diaphragm action	77
4.4.1	General	77
4.4.2	Basic requirements	78
4.4.3	Modelling and detailing	81
4.4.4	Interaction of frame systems with precast floor systems in seismic regions	83

4.5	Expansion joints	84
4.6	Structural integrity	86
4.6.1	Tie systems	86
4.6.2	Types of ties and resistance	87
4.7	Design with regard to accidental actions	90
4.7.1	Design strategies	90
4.7.2	Design methods	90
4.7.3	Tie-force method	91
4.7.4	Alternative-load-path method	92
4.7.5	Specific load resistance method	94
4.7.6	Comparison with seismic design	95
5	Structural connections	97
5.1	General	97
5.2	Basic design criteria	98
5.2.1	Structural behaviour	98
5.2.2	Dimensional tolerances	101
5.2.3	Fire resistance	102
5.3	Basic force transfer mechanisms	103
5.3.1	Encasing	103
5.3.2	Anchorage of reinforcing bars	103
5.3.3	Dowel action	105
5.3.4	Bond	106
5.3.5	Friction	107
5.3.6	Shear interlock	107
5.3.7	Staggered joints	108
5.3.8	Bolting	109
5.3.9	Welding	109
5.3.10	Post-tensioning	110
5.4	Types of structural connections	110
5.4.1	Connections transferring compressive forces	110
5.4.2	Connections transferring tensile forces	119
5.4.3	Connections transferring shear forces	122
5.4.4	Connections transferring bending moments	127
5.4.5	Connections transferring torsion	137
5.5	Other design criteria	140
5.5.1	Manufacture	140
5.5.2	Storage and transport	141
5.5.3	Erection	141
6	Portal-frame and skeletal structures	142
6.1	Introduction	142
6.2	Types of precast framed structures	144
6.2.1	Portal frames	144
6.2.2	Portal frames with intermediate floors	147
6.2.3	Skeletal structures	148
6.3	Layout and modulation	154
6.4	Structural stability	156
6.5	Elements	158
6.5.1	General	158
6.5.2	Columns	158

	6.5.3	Beams	159
6.6		Examples of typical connections	168
	6.6.1	Column-to-foundation	168
	6.6.2	Beam-to-column	170
	6.6.3	Column-to-column-to-beam	171
	6.6.4	Beam-to-beam	176
7		Wall-frame structures	177
	7.1	General	177
	7.2.	Structural systems	177
		7.2.1 Structural systems	177
		7.2.2 Cross-wall system	179
		7.2.3 Spine-wall system	180
	7.3	Modulation	181
	7.4.	Structural stability	181
		7.4.1 Actions	182
		7.4.2 Eccentricities	182
		7.4.3 Horizontal stability	185
	7.5	Elements	194
		7.5.1 Solid interior walls	194
		7.5.2 Twin walls	195
		7.5.3 Retaining walls in underground structures	196
		7.5.4 Foundation walls	196
	7.6	Examples of typical connections	196
		7.6.1 Wall-to-wall	197
		7.6.2 Wall-to-floor	197
		7.6.3 Wall-to-stair	199
		7.6.4 Wall-to-beam	199
8		Floor and roof structures	201
	8.1	General	201
	8.2	Main types of precast floors	202
		8.2.1 Introduction	202
		8.2.2 Fully precast floors	202
		8.2.3 Semi-precast floors	204
	8.3	Concrete roof elements	206
	8.4	Stairs	208
	8.5	Modulation	209
	8.6	Design of precast floor elements	210
		8.6.1 General	210
		8.6.2 Prestressed hollow-core slabs	211
		8.6.3 Ribbed-floor elements	212
		8.6.4 Floor-plate floors	212
		8.6.5 Beam-and-block floors	212
	8.7	Design of the complete floor	213
		8.7.1 Structural integrity	213
		8.7.2 Diaphragm action	213
		8.7.3 Transverse distribution of concentrated loads	214
		8.7.4 Cantilevering floors and balconies	219
	8.8	Examples of typical connections	220
		8.8.1 General	220

8.8.2	Support connections	220
8.8.3	Connections at lateral joints	222
8.8.4	Hollow-core units clamped between walls	222
8.8.5	Support connections on steel beams	224
9	Architectural concrete façades	226
9.1	General	226
9.2	Precast façade systems	226
9.2.1	Load-bearing façades	226
9.2.2	Non-load-bearing façades	227
9.2.3	Sandwich panels	228
9.2.4	Twin-skin façades	230
9.2.5	Special elements	231
9.3	Structural stability	232
9.3.1	Stability provided by cores and shear-wall action	232
9.3.2	Stability provided by the façade	232
9.4	Principles of design and dimensioning of the units	232
9.4.1	General	232
9.4.2	Actions during the various construction phases	233
9.5	Other design aspects	233
9.5.1	Thermal deformations	233
9.5.2	Creep and shrinkage	234
9.5.3	Settlement of the supporting structure	234
9.6	Shape and dimensions of the units	234
9.6.1	Mould considerations	234
9.6.2	Preferential dimensions of the elements	236
9.6.3	Modulation	238
9.7	Surface finishing	239
9.7.1	Texture	239
9.7.2	Colour	239
9.7.3	Faced panels	239
9.8	Thermal insulation	240
9.9	Panel fixings	244
9.9.1	Types of fixings and applications	244
9.9.2	Designing to cope with differential movement	246
9.9.3	Tolerances	246
9.9.4	Durability	247
9.10	Drip grooves	247
9.11	Weathering joints	248
9.11.1	Appearance of weathering joints in façades	248
9.11.2	Design of joints	249
10	Constructional detailing and dimensional tolerances	253
10.1	General	253
10.2	Support connections	253
10.2.1	General requirements	253
10.2.2	Support length	253
10.2.3	Half joints	255
10.2.4	Beam boot support	257
10.3	Concrete corbels	258
10.3.1	General	258

10.3.2	Corbel design	259
10.3.3	Detailing of corbel reinforcement	261
10.3.4	Hidden corbels	262
10.3.5	Beam corbels	263
10.4	Design of openings and cutouts	265
10.4.1	Holes and cutouts in beams	265
10.4.2	Openings and cutouts in floors	265
10.5	Special reinforcement	267
10.5.1	Anchorage zones of prestressed components	267
10.5.2	Transverse reinforcement of column ends	268
10.5.3	Walls and façade elements	269
10.6	Dimensional tolerances	270
10.6.1	General	270
10.6.2	Types of tolerances	270
11	Fire resistance	271
11.1	General	271
11.2	Basic requirements	271
11.3	Fire actions	273
11.3.1	Decrease in material performance	273
11.3.2	Thermal expansion	275
11.3.3	Transverse deformation of cross section	276
11.4	Global structural analysis	277
11.5	Member analysis	278
11.5.1	Member analysis	278
11.5.2	Example of simplified calculation method	280
11.5.3	Analysis by testing	282
11.6	Fire resistance of components	282
11.6.1	Columns	283
11.6.2	Beams	286
11.6.3	Walls	289
11.6.4	Prestressed hollow-core walls	290
11.6.5	Ribbed floors	294
11.7	Fire resistance of structural connections	294
11.7.1	Pinned connections	294
11.7.2	Floor-beam connections	295
11.7.3	Steel inserts and connections	295
11.7.4	Joints	295
