Foreword i

Preface iii

1.	Performance-based design requirements ensuring the life-cycle	1
1.1	Introduction	1
1.2	Component safety	2
1.3	Structural system safety	2
1.4	Life-cycle & time dependent reliability	2
1.5	Serviceability	3
1.6	Durability	3
1.7	Fatigue	4
1.8	Structural redundancy, robustness and progressive collapse	4
1.9	Resiliency	7
1.10	Network reliability	7
2.	Risk issues	8
2.1	General overview of risk categories	8
2.2	Normative references	10
2.3	Terms and definitions	10
2.4	General framework of risk assessment for structures	12
2.5	Risk assessment -dire impact on the functioning of a community	13
2.6	Risk assessment - system identification	14
2.7	Risk estimation - evaluation	14
3.	Methods of structural reliability	21
3.1	Main principles and methods	21
3.1.1	General	21
3.1.2	Probability theory	22
3.1.3	Structural reliability	27
3.1.4	Application example: Collapse of a plane frame	34
3.2	Reliability methods in engineering practice	37
3.2.1	Stages of the safety concept	37
3.2.2	Failure probability and reliability index	38
3.2.3	Partial safety factors for engineering practice	40
3.3	Reliability assessment of existing structures	41
3.3.1	General aspects	41
3.3.2	Assessment decision process	42

3.3.3	Decision tree	43
3.3.4	Probabilistic modelling	44
3.3.5	Limit state functions for assessment	44
3.3.6	Evaluation of benefits and consequences	45
3.3.7	Updating of probabilities	45
3.3.8	Updating of random variables	46
3.3.9	Engineering aspects	47
4.	Safety concepts for design	52
4.1	Lifetime orientated design and remaining lifetime	52
4.1.1	Introduction	52
4.1.2	Design concepts	53
4.1.3	Remaining lifetime	54
4.2	Safety factor formats	55
4.2.1	Introduction	55
4.2.2	Global safety factors	55
4.2.3	Partial safety factors	56
4.2.4	Proof loading	64
4.3	Safety formats for non-linear analysis	65
4.3.1	Introduction	65
4.3.2	Safety formats	66
4.3.3	Methods of global safety verification	68
4.3.4	Partial factor method	70
4.3.5	Nonlinear analysis	71
4.3.6	Examples of application	71
4.3.7	Concluding remarks	74
5.	Testing for assessment and design	75
5.1	Testing for design	75
5.1.1	Design and planning	75
5.1.2	Derivation of design values	76
5.1.3	Outlier test	76
5.1.4	Design values	77
5.1.5	Direct determination of design values	80
5.1.6	Probabilistic-based assessment of sampling	94
5.2	Stochastic models for design	98
5.2.1	Stochastic models for the resistance of structural engineering	98
6.	Inspection and monitoring	104
6.1	Introduction	104
6.2	Inspection framework for maintenance of structures	105

6.2.1	General remarks	105
6.2.2	Hierarchical structure of databases	105
6.3	Structural monitoring	106
6.3.1	General remarks	106
6.3.2	Introduction	107
6.3.3	Principles of monitoring structures	107
6.3.4	Monitoring associated model updating	110
6.3.5	Sensors for monitoring systems: A brief review	111
6.3.6	Cost models for monitoring systems	117
6.3.7	Strategies for inspection and monitoring	117
6.3.8	Model uncertainties resulting from the structural inspection	120
6.4	Monitoring based reliability assessment	124
6.4.1	General remarks	124
6.4.2	Introduction	124
6.4.3	Design of monitoring systems	124
6.4.4	Acceptance by attributes	124
6.4.5	Acceptance by variables	126
6.4.6	Extreme value distributions for monitoring based predictions	127
6.4.7	Reliability assessment based on monitoring information	132
6.5	Monitoring based performance indicators	135
6.5.1	Code specific given limit states and associated monitored quantities	136
6.5.2	Properties of monitoring systems and associated sensors	136
6.5.3	Optimizing monitoring systems and sensor properties with respect to performance indicators	137
6.5.4	Definition of monitoring based performance indicators	137
6.5.5	Advanced monitoring system	137
6.6	Risk based inspections	138
6.6.1	General remarks	138
6.6.2	Introduction	138
6.6.3	Risk based inspection planning for structures	139
6.6.4	Optimization of inspection strategies	141
6.6.5	Example on deterioration using Risk Based Inspection (RBI) modelling	143
6.6.6	Generic approaches to risk based inspection (RBI)	146
6.6.7	System effects in risk based inspection	147
6.6.8	Conclusions	148
7.	Life cycle performance	150
7.1	General	150
7.2	Prediction of life-cycle performance	150

7.2.1	Point-in-time reliability	151
7.2.2	Unavailability	152
7.3	Optimization of maintenance	153
7.3.1	Introduction	153
7.3.2	Types of maintenance actions	158
7.3.3	Optimization of essential maintenance	160
7.3.4	Optimization of preventive maintenance	162
7.3.5	Optimization of combined maintenance	165
8.	Structural identification and prediction methods	167
8.1	Introduction	167
8.2	State of the art	169
8.2.1	Methods based on changes of basic modal parameters	170
8.2.2	Methods based on updating of structural parameters	174
8.3	Identification method based on artificial neural network	176
8.3.1	Introduction	176
8.3.2	Latin Hypercube Sampling statistical simulation	177
8.3.3	Statistical correlation	178
8.3.4	Sensitivity analysis	178
8.3.5	Artificial neural networks	179
8.3.6	Basic concept of the identification method	180
8.3.7	Software tools	181
8.4	Direct stiffness identification method	182
8.4.1	Introduction	182
8.4.2	Elements of a monitoring and system-identification system (MIS)	183
8.4.3	Structural model	184
8.4.4	System identification	185
8.4.5	Direct stiffness calculation	186
8.4.6	Influence-line oriented identification systems	188
8.5	Other identification methods	193
8.6	Sensitivity factor method	193
8.6.1	General aspects	193
8.6.2	Introduction	193
8.6.3	Linear systems	194
8.6.4	Summary	196
8.7	Gamma prediction method	196
8.7.1	General Remarks	196
8.7.2	Gamma processes for describing the degradation properties	198
8.7.3	Characteristics of stochastic processes	198
8.7.4	Modelling of gamma processes	199

8.7.5	Application of gamma processes for deterioration processes	200
8.7.6	Selection of inspection methods	203
9.	Probabilistic based models for material degradation processes	205
9.1	Introduction	205
9.2	Degradation and limit states	206
9.2.1	Limit states: General	206
9.2.2	Design for durability	208
9.2.3	Durability limit states	209
9.2.4	Initiation period	210
9.2.5	Propagation period	211
9.3	Deterioration of concrete structures	213
9.3.1	Carbonation	213
9.3.2	Chloride ion ingress	214
9.3.3	Corrosion	215
9.3.4	Frost attack	215
9.3.5	Fire attack	217
9.3.6	Alkali-aggregate reaction	217
9.4	Analytical models for degradation	218
9.4.1	Carbonation	219
9.4.2	Chloride ion ingress	224
9.4.3	Corrosion	227
9.4.4	Frost attack	231
9.4.5	Fire attack	231
9.4.6	Alkali-aggregate reaction	234
9.5	Software	235
9.6	Illustrative examples of Durability Design/Assessment	236
9.6.1	Reinforcement depassivation – assessment of initiation period	237
9.6.2	Loss of reinforcement due to corrosion	238
10.	Case studies applications	241
10.1	Reliability based assessment of a segmental bridge – Austria	241
10.2	Reliability based assessment of a prestressed box girder bridge – Italy	243
10.2.1	Deterministic model	243
10.2.2	Probabilistic analysis	246
10.2.3	Ultimate Limit State ULS/Structure	248
10.2.4	Time dependent degradation considerations	249
10.2.5	Strengthening measures	249

10.3	Reliability based structural and durability analysis of a prestressed-precast V-beam bridge - Italy	250
10.3.1	Introduction	251
10.3.2	Neumarkt Bridge	252
10.3.3	Inspection	252
10.3.4	Performance assessment activities	254
10.4	Monitoring and analysis for the evaluation of fatigue resistance in existing post-tensioned concrete bridges	271
10.4.1	Background – Behaviour of prestressed concrete bridges subject to fatigue loading	271
10.4.2	Monitoring	272
10.4.3	Measuring set-up	273
10.4.4	Analysis of the concrete strains and the crack width	274
10.4.5	Verification of the service stress range of the tendon coupler assemblies	276
10.4.6	Conclusions	277
10.5	Monitoring and reliability assessment of a jointless bridge structure – Austria	277
10.5.1	Introduction	277
10.5.2	General aspects of the Marktwasser Bridge, S33.24	278
10.5.3	Monitoring systems applied on the Marktwasser Bridge, S33.24	279
10.5.4	Verification of an analytical creep shrinkage model	290
10.5.5	Analysis of the slab detail	292
10.5.6	Conclusion	294
10.5.7	Acknowledgement	294
10.6	Egnatia motorway, Northern Greece: Monitoring based risk assessment of bridges	294
10.6.1	Introduction	295
10.6.2	Risk assessment of bridges	295
10.6.3	Major risks for Egnatia bridges	296
10.6.4	Bridge visual inspection and data base recording	299
10.6.5	Bridge health monitoring activities	302
10.6.6	Conclusions	308
11	References	310
